

The top 5 benefits of optical bonding

If you're looking for digital signage for your business, school or meeting room, you want a high-quality solution with brilliant visuals, easy integration and a long life. But if your visual display will be subject to a demanding environment—an outdoor location, high-ambient light conditions, a high-traffic public space—or will be used in a touch screen interactive application, etc., you need more. Investing in a professional-grade, optically-bonded LCD panel may be your ideal display solution.

With optical bonding, a protective cover glass is directly adhered to the LCD display with a thin, uniform layer of adhesive, effectively eliminating the air gap between the cover glass and display. This process increases optical clarity, protects the display from dust and moisture, reduces parallax issues, improves scratch and damage resistance, and is thin and lightweight.

Conventional plastic/glass cover

Cover glass optically bonded to LCD

Let's take a closer look...

Top 5 benefits of optically bonded cover glass on LCD displays		
1 Increases optical clarity	2 Protects display from dust and moisture	3 Reduces parallax issues
<i>Optically bonding the cover glass to the display creates a single index of refraction, which eliminates internal reflection</i>	<i>Optically bonding the cover glass to the LCD display protects the display from dust and moisture</i>	<i>Optical bonding reduces parallax issues, where a gap between the cover glass and LCD display can create the illusion that pixels shift position depending on your line of sight</i>
<ul style="list-style-type: none"> • Helps ensure crisp detailed images and high brightness <p>Lowered surface reflection:</p> <ul style="list-style-type: none"> • reduces internally reflected light loss • reduces glare • increases visual clarity <p>Reduced ambient light reflection:</p> <ul style="list-style-type: none"> • increases perceived contrast ratio • increases the amount of usable light <ul style="list-style-type: none"> • Enables display to be more readily seen, even in bright ambient conditions 	<ul style="list-style-type: none"> • Protects the display from moisture in humid environments because condensation can't form between the cover glass and the display • Protects the display from dust and air particles in environments where air quality is an issue 	<ul style="list-style-type: none"> • Increases the display's range of viewing angles • Delivers more precise touch alignment in touch-based interactive systems
4 Scratch and damage resistance	5 Scratch and damage resistance	
<i>Optically bonded cover glass acts as a protective layer for the LCD display</i>	<i>Optically bonded cover glass is thin and lightweight, compared to alternative treatments or standard soda-lime glass</i>	
<ul style="list-style-type: none"> • Protects display from scratches, fluids, stains and dirt • Improves durability and damage resistance • Reduces or eliminates the need for custom protective enclosures or heavy soda-lime cover glass • Withstands use in high-traffic public environments 	<ul style="list-style-type: none"> • Lightweight cover glass reduces transportation and installation costs • No added depth to display design allows for easy integration • A lighter display simplifies installation and servicing 	

Confidently display your message almost anywhere

Christie® has your visual solution, for even challenging or difficult environments.

Check out the [Christie FHD551-X](#): this 55" professional-grade, tiled LCD panel solution includes the superior protection of optically bonded Corning® Gorilla® Glass, for touch screen interactivity in high-traffic areas.

If you need to 'take your message outside', we offer the [Christie WeatherAll FHD551-W](#), our 55" optically bonded outdoor LCD. It's fully weatherproof, water- and impact-resistant, and can be deployed in virtually any environment.

Christie's industry-renowned technical service and customer support help ease your installation, and a comprehensive warranty helps protect your investment.
